Debris Flow Disaster | Part 1 |

Bachelor Thesis | Department of Social and Regional Development | National Taipei University of Education

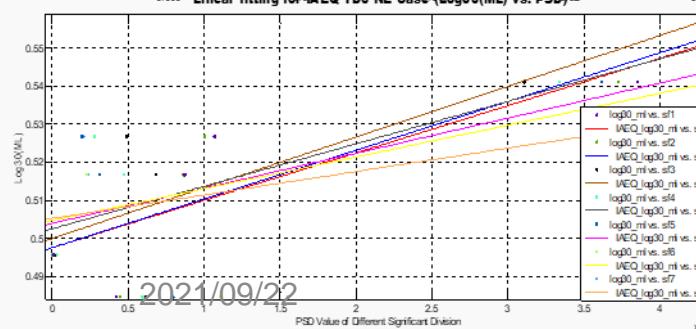

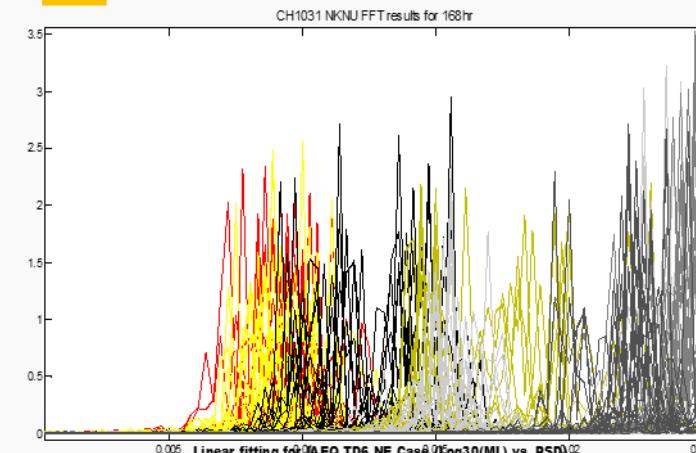

Gap/ Objectives: The Chi-Chi huge earthquake occurred in Taiwan in 1999 and it changed the critical rainfall line of debris flow streams; therefore, how to establish a new critical rainfall line for each debris flow stream with a limited data becomes a vital issue. This study conducted family competition genetic algorithm and support vector machine to establish the critical rainfall line.

Seismic Precursor | Part 2 |

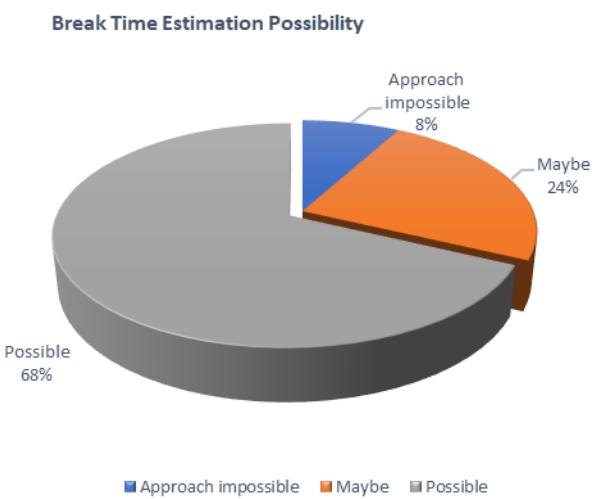

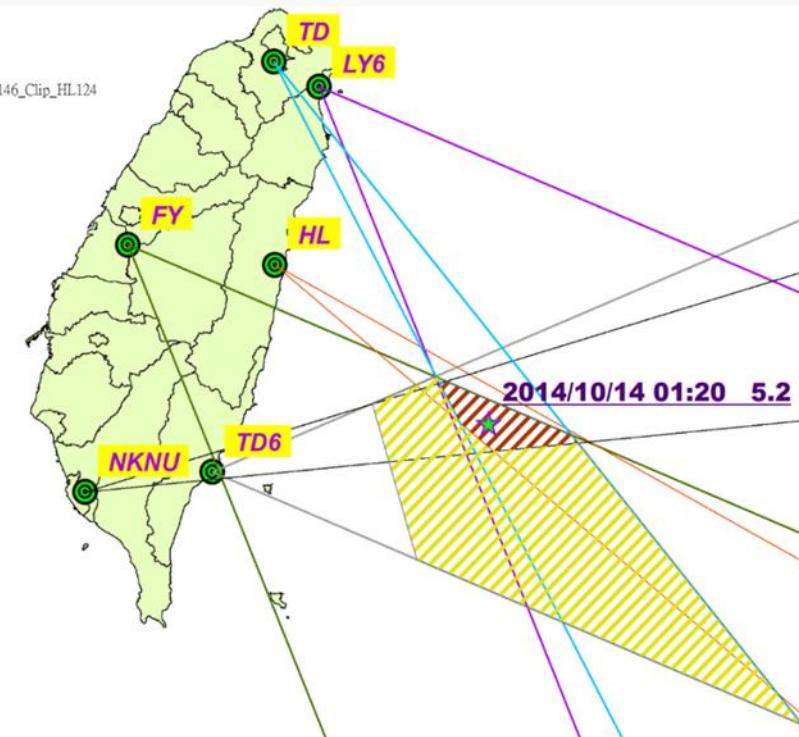

Master Thesis | Department of Geography | National Taiwan University

Gap/ Objectives : Taiwan is suffered from earthquake disasters; however, state-of-art only performed case study and empirical equation to depict seismic precursor with a low spatial and temporal accuracy. This study deployed signal processing to capture the feature frequency band, identified the epicenter, estimated break time and magnitude of an earthquake events.

Aviation Market | Part 3 |

Ph.D. Thesis | Department of Geography | National Taiwan University

Gap/ Objectives : Aviation market plays an important role in the accessibility between countries, consisting of airports and routes. However, market-related studies did not consider the connectivity and airport network-related studies neglected the market characteristics. Thus, this study is to utilize the concept of airport community to understand the spatial patterns of the market region in an airline alliance and characterize the differences between airline, including regions of collaboration, competition, and dominance.

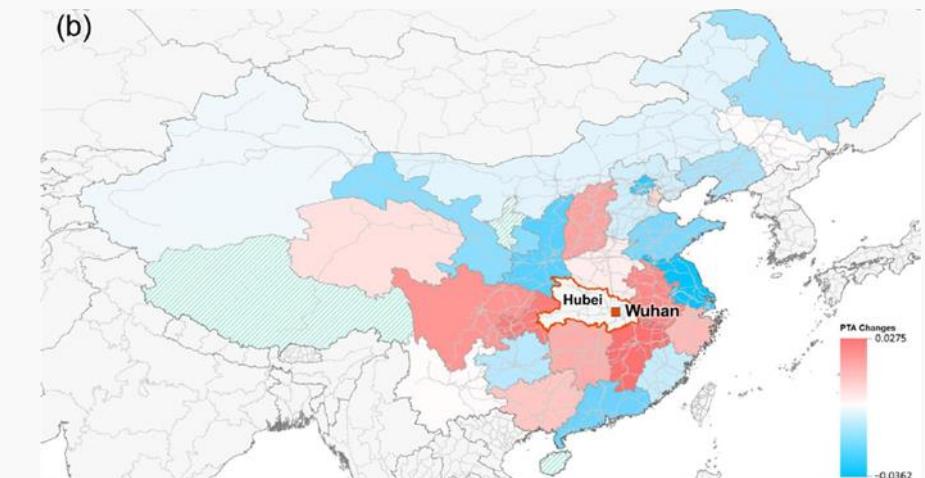

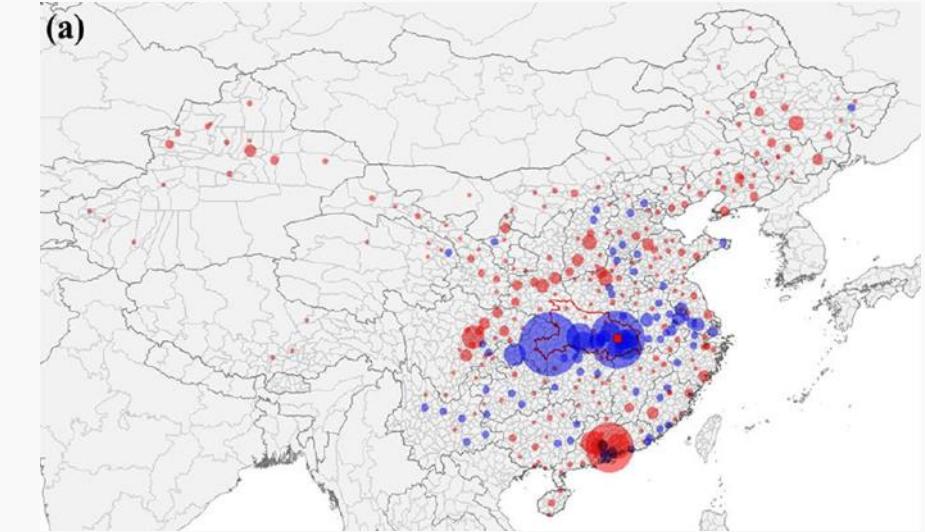

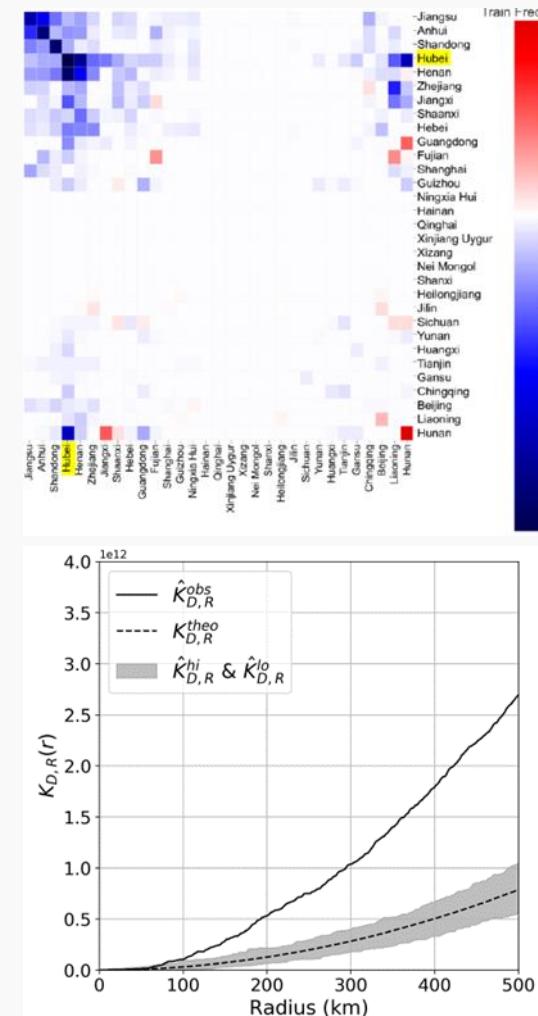

Epidemic Transmission

| Part 4 |

MOST Project | Department of Geography | National Taiwan University

Gap/ Objectives : The possible reasons of a large number of confirmed cases concentrated in the neighboring provinces of Hubei have not been fully discussed after the Wuhan city lockdown. Therefore, this study aims to assess the changes in railway passenger transport on the early spatial transmission of COVID-19 in mainland China.

Starch - *in vitro* digestibility | Part 5 |

Master Thesis | Department of Food Science, Nutrition, and Nutraceutical Biotechnology | Shih Chien University
